

iOS 8

What's New What is iOS Developer

Huge for developers. Massive for everyone else.

iOS 8 is the biggest iOS release ever — for developers and everyone else. But that wasn't the goal. We simply set out to create the most natural, most useful experience — one that is pleasantly surprising at first and becomes utterly indispensable before you know it.

What's new in iOS 8.

Quickly find and edit the photos you take. Add your voice right in a text message. Let your health and fitness apps communicate with each other, with your trainer, and even with your doctor. We've also provided developers with deeper access and more tools. You'll have new keyboard options and even more ways to share your content. And you'll be able to use iCloud and Touch ID in ways you never have before. Here are some of the things iOS 8 can do for you so you can do more than ever.

Photos. Be the master of your photo collection.

The all-new Photos app makes it simpler than ever to find and rediscover your favorite photos with new search features and smart albums that organize your photos for you. And you can make every shot look even better. Immediately after you've taken it with powerful new editing tools, no matter your skill level. And iCloud Photo Library, in beta, stores every photo and video you take, making them accessible from your iPhone, iPad, and iPod touch.

Messages. Actually LOL. OL.

Now Messages lets you connect with friends and family like never before. Tap to add your voice to any conversation. Send a video of what you're seeing the moment you're seeing it. And easily share your location so they know right where you are.

Details make the experience. These details make it brilliant.

In iOS 8, you'll find a convenient new way to respond to notifications. Helpful shortcuts to the people you talk to most. And time-saving features for managing your mail. All of which make the experience of using your iPhone, iPad, or iPod touch that much better.

Our smartest keyboard ever.

iOS 8 makes typing easier by suggesting contextually appropriate words to complete your sentences. It even recognizes to whom you're typing and whether you're in Mail or Messages. Because your tone in an email may be different from your tone in a message.

Family Sharing. Sharing with your family comes naturally. Now it comes to all your content.

Up to six people in your household can easily share each other's purchases from iTunes, eBooks, and the App Store. You can also keep up with each other's photos, calendars, locations, and more.

[Learn more >](#)

iCloud Drive. Any kind of file. On all your devices.

The good news: You can work on any file, anywhere. The bad news: You can work on any file, anywhere. That includes presentations, PDFs, images, and more — right from iCloud. On whichever device you're using, including your Mac or PC.

[Learn more >](#)

Health. An entirely new way to see and use your health and fitness information.

Now your activity tracker, heart rate monitor, and other health and fitness apps can talk to each other. Which means they'll be able to work even harder for you. And all the information is accessible in one easy-to-read dashboard.¹

iPhone, iPad, and Mac. Connected like never before.

Things are about to get even better for people with multiple Apple devices. Now you can start an email on one device and seamlessly continue on another. And iPhone owners can answer phone calls on their iPad, and also send SMS messages from any of them.²

[Learn more >](#)

Spotlight. Brighter than ever.

Sometimes you're looking for a contact or an app. Sometimes you're looking for answers. Spotlight now gives you suggestions from Wikipedia entries, places nearby, trending news, and more. It's even smart enough to recognize context and location to offer you the most relevant information.
